Date:8/13/15 S. Incident Area 6. Hazards/Risks 7. Mitigations 5. Incident Area Operations: Mine Operations: Treatment of mine waste (settling ponds) also by adjusting ph by adding flocculants. Full Site HASP for Gold King Mine operations are detailed in the site specific health and safety plan located with the site OSC. Sample Teams: Three water sampling teams have been developed to sample the river water, river sediment, and private well water. CDPHE is performing municipal water sampling and not included in the EPA ops plan. River Sampling: START is collecting river water samples at seven locations, four in Durango and three in Silverton. Sediment Sampling: START is collecting composite 2" sample sediment cores along the river in Durango and at various public access points throughout the city. Two sampling teams are deployed for these activities during this operational period. Well Sampling: Well sampling is currently being performed with two START teams encompassing private water wells. Water distribution: Based on city and private citizen requests EPA START is providing water distribution services of both potable and non-potable water. 6. Hazard/Risks – per operations & general hazard information Mine Operations: Hazards/Risks are identified in the site specific health and safety plan per the mine operations plan. Sample Teams: Some of the hazards and risks for the sample teams are severe weather, altitude, fatigue, heat stress/proper hydration, slip trips and falls, along with drivers safety. 7. Mitigations: Mine Operations: Mitigations and PPE are specified in the site specific health and safety plan operations.		J. A.	One wettered Barried, 9 / 12 / 15 A	h 8/15/15 06:00 06:00
